Muhammad Anas Haleem

Software Engineer

anashaleem.dev@gmail.com | +92 326 4755997 | Lahore, Pakistan | LinkedIn | LeetCode

PROFESSIONAL SUMMARY

Full stack developer and Founder building VaultCV, an AI powered SaaS product, from architecture to shipped feature, spanning full-stack development, AI integration (LLM APIs, prompt engineering), and business strategy. MERN stack developer by trade, currently solving production problems like multi-instance queue scaling and AI provider integration in a live product.

TECHNICAL SKILLS

FrontEnd: React.js, JavaScript, Tailwind CSS

Backend: Node.js, Express.js, MongoDB, RESTful API Design, JWT Authentication, bcrypt

AI & LLMS : Groq API, OpenAI-compatible APIs, Prompt Engineering, ElevenLabs (TTS), VAPI (Voice AI Agents), ManyChat(Chat Bots)

Tools: Git, GitHub, VS Code, Vercel, Render, Postman (API Testing), Antigravity

CS Fundamentals: Data Structures & Algorithms (LeetCode 120+ problems, Python), Object-Oriented Programming (OOP), Computer Networks, Artificial Intelligence

WORK EXPERIENCE

Associate Software Engineer *Preesoft Pvt Ltd, Lahore* **June 2026 - Present**

- Resolved 30+ bugs on AirAsia's flight scheduling and management system, a live enterprise application used in airline operations.
- Developed core flight scheduling functionality, including super-admin controls for editing flight schedules, route frequency, station assignments, and arrival/departure details.
- Built the reports section, filtering system, and itinerary view — features used to search, analyze, and review flight schedule data across the platform.

Founder *VaultCV* **May 2026 – Present**

- Founded and building an AI-powered resume tailoring platform solving two core problems in job applications: the hours job seekers lose manually tailoring resumes for each role, and the shallow, error-prone output of existing AI tools that only map a single pasted resume/JD pair without knowing a candidate's full history.
- Designed a "career vault" model — users store their complete profile (education, skills, experience, projects, GitHub repos) once, then generate a tailored, ATS-optimized, editable resume for any job description on demand, grounded in real data instead of AI-generated bluffing.

PROJECTS

Al-Ala Imprest System:

- Built a digital fund management system for an international school, replacing manual paper-based expense and income tracking led a 3-person team from requirement gathering through handover
- Gave the school's managing director real-time visibility into finances from anywhere, replacing a process where expenses were only synced up when she was physically in-country

AirAsia Flight Reports & Itinerary Module

- Built the reports, filtering, and itinerary-view features from scratch, giving the team a structured way to search and analyze flight data across a live enterprise system.
- light schedule data (routes, frequencies, arrivals/departures) had no easy way to be searched, filtered, or reviewed within the scheduling system.

VaultCV — AI Resume Tailoring Platform

- Built a "career vault" model — users store their full profile once, then generate a tailored, ATS-optimized resume for any job on demand, grounded in real data instead of AI-guessed content.
- Existing AI resume tools only map a single pasted resume against a job description — they don't know a candidate's full history, so they bluff or miss relevant experience.

EDUCATION

BSc Software Engineering

PUCIT – Punjab University College of Information and Technology, Lahore

CGPA: 3.47 / 4.00
